

Walk On Water Global warming could mean that 97% of the world's surface gets covered in water. Rather than panicking, we salute Waterstudio.NL's attitude. Since 2003 this company from the Netherlands has been specialising in "architecture and urbanism related to living, working and recreation on water"; ie, they invent pioneering houses, car parks and streets that float on water. Welcome to Waterworld. ■ www.waterstudio.nl
