**3 Koen Olthuis**  
 39 ans, architecte néerlandais  
 En première ligne face à la montée des eaux, les Pays-Bas déploient des trésors d'imagination pour résister à l'envahisseur. Après les polders, voici les quartiers flottants et amovibles à greffer sur les zones côtières. Dans son livre, « FLOAT! », paru en 2010, Koen Olthuis prône la conquête de la mer comme le remède à la congestion urbaine et au changement climatique. Ses îles artificielles de 200 mètres par 200 sont démontables et ne laissent aucune « cicatrice » (ci-dessus, un système de culture sur barge). On peut en faire des zones habitables, cultivables ou dédiées à la production d'énergie à partir des ressources marines : éolien, vagues, solaire... L'architecte veut conjurer le sort. « En développant ces projets, on veut faire passer les futurs réfugiés climatiques du statut de victimes à celui de précurseurs. »

## The 100 that will change the world in 2011

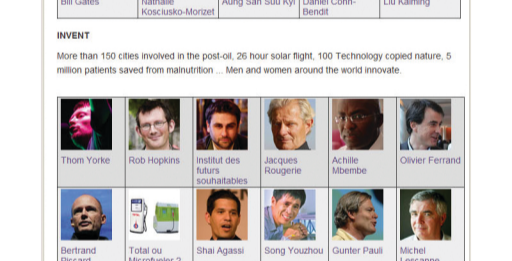

Feature - "Do not expect the world to change itself, change it yourself. That's the common thread that links the personalities selected by the editors of Terra eco in this special issue."

Invent, share, protect, and slow recycling: in five themes - and in ten headlines to start - we offer a trip around the world in everyday life, imagination and the plans of those who sow the seeds of a new world. Of course, this gallery of "those who change the world" is not exhaustive and we take the cast also subjective and imperfect. But the English chef Jamie Oliver to the French social entrepreneur Jean-Marc Borello, the mad tinkerer Olivier Chambon in Indian writer Arundhati Roy, through the President of Brazil Dilma Rousseff or Radiohead frontman Thom Yorke is what powerful blast that we want to remember. Follow us.

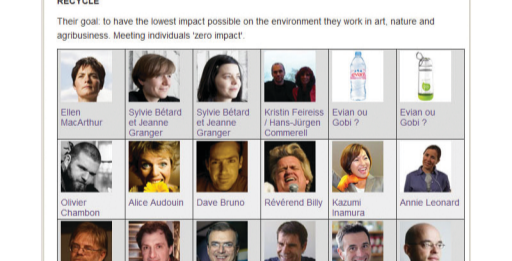

**10 Headliners**

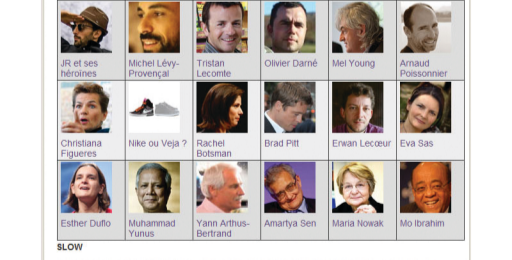

**INVENT**  
 More than 150 cities involved in the post-oil, 26 hour solar flight, 100 Technology copied nature, 5 million patients saved from malnutrition ... Men and women around the world innovate.

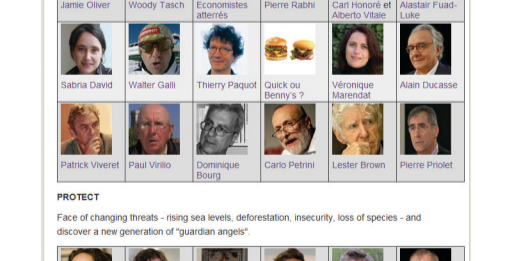

**RECYCLE**  
 Their goal: to have the lowest impact possible on the environment they work in art, nature and agribusiness. Meeting individuals 'zero impact'.

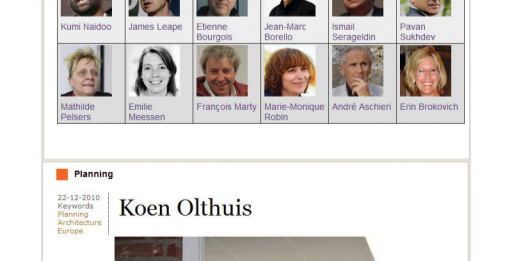

**SHARE**  
 Giant photographs, micro-credit, a drill, honey or soccer competition: these have realized that the future was in the exchange.

**SLOW**  
 In their plates, their thoughts, travel, education of their children, their professional activities or sexual abuse. They ra-len-weave.

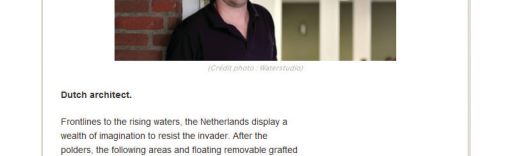

**PROTECT**  
 Face of changing threats - rising sea levels, deforestation, insecurity, loss of species - and discover a new generation of "guardian angels".

**Dutch architect.**  
 Frontlines to the rising waters, the Netherlands display a wealth of imagination to resist the invader. After the polders, the following areas and floating removable grafted onto coastal areas. In his book, FLOAT!, published in 2010, Koen Olthuis advocated the conquest of the sea as the remedy for congestion and climate change. His artificial islands of 200 meters by 200 are removable and leave no "scar". We can make living areas, arable and dedicated to producing energy from marine resources: wind, waves, solar ... The architect wants to avert the situation. "By developing these projects, we want to put the future refugees Climate victim status to that of precursors."
