Floating green

Golf ■ Tropical handicap

The Maldives may soon boast a few fairways as well as fair weather. Plans to build a \$500 million sustainable floating golf course have been unveiled by Troon Golf, Waterstudio NL and Dutch Docklands. The greens are designed to be eco-friendly, comprising a set of solar-powered floating platforms with interconnected underwater tunnels, plus golf's biggest water hazard - the Indian Ocean! Due to finish in 2015. See waterstudio.nl
