低窪國的翡翠城：兩棲屋

The Low Land Emerald City: Amphibian Houses

在全球氣候劇烈變化的同時，許多國家開始以新的思維與科技來降低天然災害的損失，如60%的領土都在海平面以下的荷蘭，就開發出「兩棲屋」的概念，讓住宅可以浮在水面上。

As dramatic changes to the Earth's climate continue, countries have begun to think of new ways to adapt to subsequent environmental impacts. 60% of land in the Netherlands for example, is under sea-level; here, the Netherlands has initiated a program to promote the concept of "Amphibian Houses" that can float on the surface of the rising waters.
